

Direct Flow (North America)

The Apricus Direct Flow Pump Station (DFPS) is designed to be used in residential solar thermal systems where the installation site does not normally see freezing temperatures and potable water circulates through the collector(s). All components needed for the solar pumping center are included to streamline the installation process.

Key Features

- 3/4" copper with quick connect fittings
- Pre-plumbed and pre-wired
- Integrated flow setter
- Large temperature and pressure gauge
- Flanged, stainless steel circulator
- Pressure relief valve
- Power outage drip valve
- Advanced solar controller
- Insulated EPP cover
- Pressure tested in factory
